Cerámicas Aparici, S. A. fabrica y comercializa pavimentos y revestimientos cerámicos y porcelánicos para el mercado nacional e internacional. La compañía cerámica se gesta en Alcora (Castellón de la Plana) en 1961, lugar donde la fabricación azulejera es ya, una tradición asociada a su cultura. En sus orígenes cuenta con un equipo de 8 personas con el que se dedica a elaborar bizcocho mediante hornos tradicionales. En 1966, momento de un gran auge cerámico en toda la provincia, realiza una primera ampliación alcanzando 10.000 m² de instalaciones y una plantilla de 50 trabajadores. En su crecimiento empresarial, Cerámicas Aparici, destaca por ser una de las empresas pioneras en lanzar al mercado el pavimento cerámico. A finales de la década de los setenta efectúa una segunda fase de ampliación en la que alcanza los 150 empleados, con unas instalaciones de 20.000 m² y con una capacidad productiva de 6.000 m². Actualmente, las instalaciones de Cerámicas Aparici reúnen una capacidad productiva que llega a alcanzar los 15.000.000 m²/año y un total de 280.000 m² (incluyendo un espacio para la exposición de nuestra amplia gama de producto y que con 1.600 m² es considerado uno de los más grandes del sector).

Cerámicas Aparici S.A. produces and commercializes ceramic wall and floor tiles and porcelain tiles to the national and international market. The ceramic company is managed in Alcora (Castellón de la Plana) in 1961, the place where the fabrication of tiles is already, a tradition associated with its culture. In its origins it counted with a team of 8 people with which is dedicated to elaborate a ‘ bizcocho ’ through traditional kilns. In 1966, moment of a big boom in ceramics in all the province, the first expansion is made getting to the 10.000 square meters of installation and a work force of 50 workers. In its business growth, Cerámicas Aparici stands out for being one of the pioneer companies to launch to the market the floor tiles. At the end of the decade of the 70s, the second expansion takes place in which Cerámicas Aparici reaches the 150 workers, with facilities of 20.000 square meters and with a productive capacity of 6.000 square meters . At the moment, the facilities of Cerámicas Aparici possesses a productive capacity that reaches the 15.000.000 square meters a year and a total of 280.000 square meters (including a space to display our large range of products and that with 1.600 square meters is considered one of the largest in its sector).

Cerámicas Aparici S.A. fabrique et commercialise du carrelage et des revêtements en céramique et en porcelaine pour le marché national et international. Cette société a vu le jour à Alcora (Castellón de la Plana) en 1961, lieu où la fabrication de carreaux de faïence est déjà une tradition liée à sa culture. Au départ, elle possédait une équipe composée de 8 personnes et élaborait des biscuits avec des fours traditionnels. En 1966, la céramique connaît un grand essor dans toute la région, la société agrandit ses locaux et atteint les 10.000 m² avec un effectif de 50 employés. La société Cerámicas Aparici est l'une des premières entreprises à lancer sur le marché le carrelage céramique. A la fin des années soixante-dix, elle connaît une nouvelle phase d'expansion et parvient à un effectif de 150 employés, avec des locaux de 20.000 m² et une capacité de production de 6.000 m². Actuellement, la société Cerámicas Aparici possède une capacité de production qui atteint les 15.000.000 m²/an et un total de 280.000 m² (avec un espace pour exposer notre vaste gamme de produits et qui avec 1.600 m² est considéré l'un des plus grands du secteur).

Cerámicas Aparici, S. A. produce e commercializza ceramiche e porcellane per il mercato nazionale e internazionale. Nel 1961 nasce l'azienda a Alcora (Castellón de la Plana), un luogo dove la produzione di ceramica ha una tradizione radicata nella cultura. Inizialmente, con 8 dipendenti, l'azienda si dedica al tradizionale "Bizcocho"-Brennverfahren. Nel 1966, in un momento di grande sviluppo del settore ceramico in tutta la provincia, l'azienda realizza la prima installazione di 10.000 mq con un gruppo di 50 operai. Nella sua crescita imprenditoriale, Cerámicas Aparici, si distingue per essere una delle prime imprese nel proporre al mercato il pavimento in ceramica. Alla fine degli anni 70 effettua una seconda fase di ampliamento con 150 operai, impianti per 20.000 mq e una capacità produttiva di 6.000 mq. Attualmente la capacità produttiva è di circa 15.000.000 mq/anno e la superficie degli stabilimenti è di 280.000 mq (incluso lo spazio espositivo dell'ampia gamma di prodotti che con i suoi 1.600 mq è considerato uno dei più grandi del settore).

La Cerámicas Aparici SA fabbrica e commercializza pavimenti e rivestimenti in ceramica e porcellanato per il mercato nazionale e internazionale. La compagnia ceramica è nata ad Alcora (Castellon de la Plana) nel 1961, luogo dove la produzione di piastrelle e già una tradizione radicata nella cultura. Alle sue origini ha un organico di 8 persone con le quali si dedica ad elaborare biscotto mediante forni tradizionali. Nel 1966 , momento di grande sviluppo del settore ceramico in tutta la provincia, realizza una prima installazione di 10.000 mq con un gruppo di 50 operai . Nella sua crescita imprenditoriale, Cerámicas Aparici, si distingue per essere una delle prime imprese nel proporre al mercato il pavimento in ceramica. *
Modelo con bajo relieve engobado para rejuntar y que genera un aspecto final de mosaico sin fin.
Las piezas se deben colocar sin separación entre ellas, para que todas las juntas queden con el mismo ancho cuando se rejunte.
En caso de ir en una zona con salpicadura de agua deberá rejuntarse con mortero epoxídico para impedir posibles filtraciones a través de la junta.

*
Low relief model fully glazed with a layer of glaze over the full surface of the piece in order to create an unending mosaic aspect.
The pieces have to be laid without spaces between each other, that way all the joints will have the same width when re-grout.
If the material will be applied in a wet place there should be used an epoxy adhesive in order to avoid filtration.

Clay

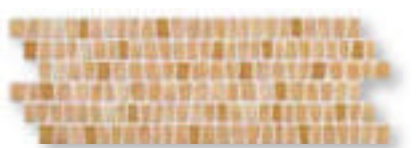

20x59,2 ■ 7.9"x23.3" | Contemporary
wall tiles/revestimiento

Clay Blanco *
20x59,2 C-515

Clay Terra *
20x59,2 C-515

Clay Miel *
20x59,2 C-515

*
Modelo con bajo relieve engobado para rejuntar y que genera un aspecto final de mosaico sin fin.
Las piezas se deben colocar sin separación entre ellas, para que todas las juntas queden con el mismo ancho cuando se rejunte.
En caso de ir en una zona con salpicadura de agua deberá rejuntarse con mortero epoxidico para impedir posibles filtraciones a través de la junta.

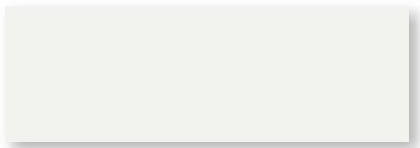

*
Low relief model fully glazed with a layer of glaze over the full surface of the piece in order to create an unending mosaic aspect.
The pieces have to be laid without spaces between each other, that way all the joints will have the same width when re-grout.
If the material is used in a wet area, an epoxy adhesive should be applied, to avoid water filtration.

*
Modelo con bajo relieve engobado para rejuntar y que genera un aspecto final de mosaico sin fin.
Las piezas se deben colocar sin separación entre ellas, para que todas las juntas queden con el mismo ancho cuando se rejunte.
En caso de ir en una zona con salpicadura de agua deberá rejuntarse con mortero epoxídico para impedir posibles filtraciones a través de la junta.

*
Low relief model fully glazed with a layer of glaze over the hall surface of the piece in order to create an unending mosaic aspect.
The pieces have to be laid without spaces between each other, that way all the joints will have the same width when re-grout.
If the material is used in a wet area, an epoxy adhesive should be applied, to avoid water filtration.

*
Modelo con bajo relieve engobado para rejuntar y que genera un aspecto final de mosaico sin fin.
Las piezas se deben colocar sin separación entre ellas, para que todas las juntas queden con el mismo ancho cuando se rejunte.
En caso de ir en una zona con salpicadura de agua deberá rejuntarse con mortero epoxídico para impedir posibles filtraciones a través de la junta.

*
Low relief model fully glazed with a layer of glaze over the hall surface of the piece in order to create an unending mosaic aspect.
The pieces have to be laid without spaces between each other, that way all the joints will have the same width when re-grout.
If the material will be applied in a wet place there should be used an epoxy adhesive in order to avoid filtration.

*
Modelo con bajo relieve engobado para rejuntar y que gene-
ra un aspecto final de mosaico sin fin.
Las piezas se deben colocar sin separación entre ellas, para
que todas las juntas queden con el mismo ancho cuando
se rejunte.
En caso de ir en una zona con salpicadura de agua deberá
rejuntarse con mortero epoxídico para impedir posibles fil-
traciones a través de la junta.

*
Low relief model fully glazed with a layer of glaze over the
hall surface of the piece in order to create an unending mo-
saic aspect.
The pieces have to be laid without spaces between each
other, that way all the joints will have the same width when
re-grout.
If the material will be applied in a wet place there should be
used an epoxy adhesive in order to avoid filtration.

*
Modelo con bajo relieve engobado para rejuntar y que genera un aspecto final de mosaico sin fin.
Las piezas se deben colocar sin separación entre ellas, para que todas las juntas queden con el mismo ancho cuando se rejunte.
En caso de ir en una zona con salpicadura de agua deberá rejuntarse con mortero epoxídico para impedir posibles filtraciones a través de la junta.

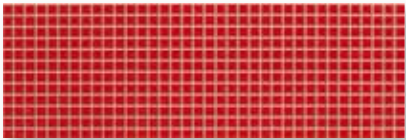

*
Low relief model fully glazed with a layer of glaze over the hall surface of the piece in order to create an unending mosaic aspect.
The pieces have to be laid without spaces between each other, that way all the joints will have the same width when re-grout.
If the material will be applied in a wet place there should be used an epoxy adhesive in order to avoid filtration.

ORO. APLICACIÓN DE PVD
Physical Vapor Deposition. PVD
El Pvd es uno de los campos de la aplicación de la nanotecnología. El proceso consiste en depositar capas de átomos, en una cámara de alto vacío, sobre una superficie sólida. El recubrimiento se produce por la condensación de un metal vaporizado, oro, titanio, platino, etc. sobre el material a recubrir.

Ventajas:
Alta resistencia al rayado y a la abrasión. Mucho mayor que los metales aplicados por cocción. Excelente dureza superficial. Proceso utilizado en el recubrimiento de herramientas utilizadas en trabajos de fricción. Resistente a productos químicos, disolventes y productos de limpieza de uso doméstico. Resistente a la corrosión. ISO 9227

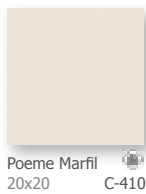

GOLD. PVD APPLICATION.
Physical Vapor Deposition (PVD)
Pvd is a field in the application of nanotechnology. The process consists of depositing layers of atoms, inside a vacuum chamber, to a solid surface. The layering is produced by the condensation of a vaporized metal (such as gold, titanium, platinum etc.) over the selected surface.

Advantages:
High resistance to abrasion and scratches; much higher than metals applied by firing. Excellent superficial strength. This process is applied in the manufacturing of tools destined to friction related applications. Resistant to chemical products, dissolvents and domestic cleaning products. Corrosion resistant. ISO 9227

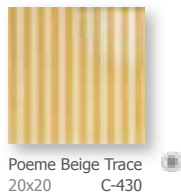

Золото. Применение PVD
Physical Vapour Deposition — это обработка твердой поверхности в вакуумной среде путём воздействия на неё молекулами других металлов для получения особо прочной и твердой поверхности изделия. Для процесса PVD-обработки в основном используются титан, золото, платина и т.д. Эта технология используется в производстве Швейцарских часов, дорогих светильников и других продуктах
Преимущества:
Покрытие PVD чрезвычайно плотно, не содержит микротрещин, устойчиво к истиранию и появлению царапин, значительно прочнее покрытий нанесенных другими методами. PVD-слой не поддается воздействию окружающей среды, стойкий к химическим продуктам, растворителям и моющим средствам.
Не поддается коррозии. ISO 9227

*
Modelo con bajo relieve engobado para rejuntar y que genera un aspecto final de mosaico.
Las piezas se deben colocar sin separación entre ellas, para que las juntas de colocación queden lo mas
disimuladas posible cuando se rejuntan.
En caso de ir en una zona con salpicadura de agua deberá rejuntarse con Mortero epoxídico para impedir
posibles filtraciones a través de la junta.

*
Low relief model fully glazed with a layer of glaze over the hall surface of the piece in order to create an unending mosaic aspect.
The pieces have to be laid without spaces between each other, that way all the joints will have the same width when re-grout.
If the material will be applaied in a wet place there should be used an epoxy adhesive in order to avoid filtration.

* The product can present tone variations, due to the components used to obtain the chemical resistance and natural finish of the metals.
The product can show progressive aging due to external factors and its metallic composition, as it recreates the authenticity of steel in its natural habitat, offering a steel look with a random machined effect between pieces wich in time can increase due to its continious use. Please use thin grain grouting materials or those of controlled granulometry (CG-2). Clean it immediately after grouting. Products to be cleaned with ph neutral.

* El producto puede presentar variaciones de tono, debido a los compuestos utilizados para conseguir la resistencia química y el acabado natural de los metales.
El producto puede presentar un envejecimiento progresivo debido a factores externos y a su composición de partículas metálicas ya que imita al acero en su estado natural, presentando distintas frecuencias de rayado entre piezas, que a su vez pueden incrementarse debido al uso. Emplear materiales de rejunte de grano fino o de granulometría controlada (CG-2). Limpiar inmediatamente después de rejuntar. Limpiar con productos con ph neutros.

Для имитации вида натуральной стали в состав данного материала входят оригинальные металлические частицы, которые под влиянием внешних факторов могут проявлять признаки прогрессивного старения. При выкладке этого продукта необходимо использовать мелкогранную затирку или затирку проконтролированной granulometрии (CG-2). Промыть сразу же после затирания используя рН-нейтральные средства.
Данный продукт может представлять различия в тоне, за счет составляющих использованных для возможности воссоздания неповторимости натуральных металов.

* For residencial use / Para uso residencial

RAISED FLOOR SYSTEM. Ceramics Aparici is a high technical product that is suitable for raised floor systems. The space between the base and the surface of transit increases thermic isolation, which allows to hide wiring and any kind of connection. The system works for interior and exterior places.

ACONDICIONAMIENTO DEL FONDO. Gracias a sus altas prestaciones mecánicas, el producto de Ceramics Aparici se puede utilizar como pavimento sobreelevado. El espacio entre la base y la superficie de tránsito proporciona aislamiento térmico, y permite ocultar cableado o cualquier clase de conexión. Este sistema funciona tanto para interiores como para exteriores.

VENTILATED FAÇADES. At present, and since a few years ago, façades have been evolving towards finishes of differentiating concepts. Up to date, the façades closures with ventilation chamber seemed vetoed to certain types of buildings, like buildings of singular characteristics. However, today, prices and, in particular the professionals of the sector have been progressing towards the globalization of this type of façades.

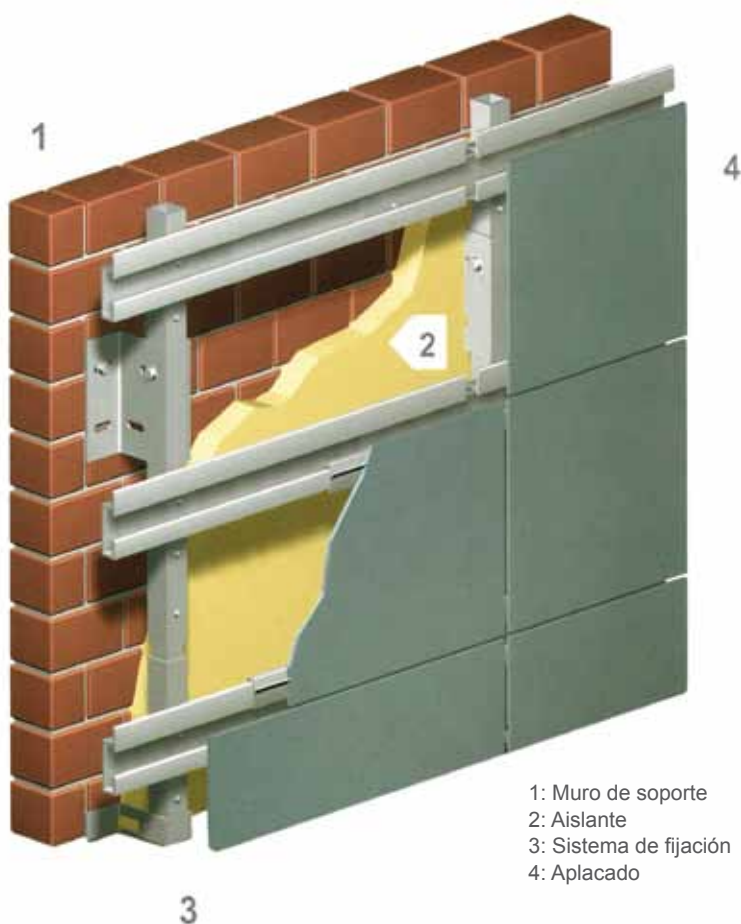

VENTILATED FAÇADE ADVANTAGES

- Better thermal isolation
- Energetic savings when air conditioning- heat until 35%
- Better acoustic isolation. It can reduce noises around 20%
- Security when you fix floor because you use mechanical and quimical anchorage
- Less number of thermic fridge because the gap between wall and floor
- More structure stability, because it avoids abrupt changes of temperature
- Minimize damp risks by filtration cloudy
- Easy to clean and to manipulate

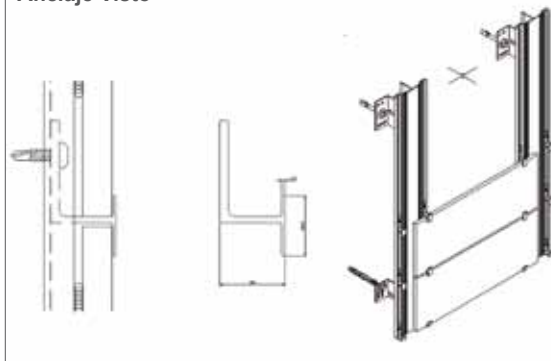

FACHADAS VENTILADAS. En la actualidad, y ya desde hace varios años, las fachadas han ido evolucionando hacia conceptos y acabados diferenciadores. Hasta el momento, los cierres de fachada con cámara de ventilación, parecían vetados a determinados tipos de edificación, como eran los edificios de carácter singular. Sin embargo, a día de hoy, los precios y sobre todo, los profesionales del sector, han ido progresando hacia la universalización de este tipo de fachadas.

VENTAJAS DE LA FACHADA VENTILADA

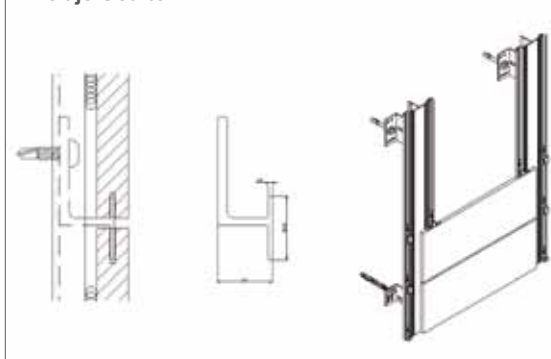

- Mayor AISLAMIENTO TÉRMICO.
- AHORRO ENERGÉTICO en la utilización de sistemas de climatización, frío - calor de hasta un 35%.
- Mayor AISLAMIENTO ACÚSTICO. Puede reducir la penetración de ruidos entorno a un 20%.
- SEGURIDAD en la fijación de los revestimientos al usar anclajes mecánicos y químicos.
- Menor número de PUENTES TÉRMICOS al quedar una separación entre el revestimiento y el muro.
- Da mayor ESTABILIDAD a la estructura, al evitar los cambios bruscos de temperatura.
- Minimiza riesgos de HUMEDADES por filtraciones de condensación y de lluvia.
- Facilidad de MANIPULACIÓN y LIMPIEZA.

This technique is based in the force of a stream water and other abrasive materials propelled by pressure. Waterjet allow us a perfect cut finished or to make composition it doesn't matter how difficult they are.

After processing is complete the material can be assembled. Other techniques can also be used for assembly such as mounting the pieces on fibre netting or bonding rigid ends using resin.

Esta técnica se basa en la fuerza de un chorro de agua y otros materiales abrasivos propulsados a presión. El empleo de esta técnica nos proporciona un acabado perfecto a cualquier corte o composición que se desee realizar por compleja que ésta sea.

Aplicado el corte al material, éste se proporciona cortado y ensamblado, aunque existen otras técnicas como el enmallado de las piezas o terminaciones rígidas mediante resinas.

CERAMICAS APARICI carries out laboratory tests to set the technical characteristics of each one of its products (measurements and surfaces appearance) and certify that it applies the current norms.

CERAMICAS APARICI realiza ensayos de laboratorio para determinar las características técnicas de cada uno de sus productos (medidas y aspecto superficial) y certificar que se cumple con la normativa vigente.

PRODUCT CERTIFICATIONS. CERTIFICADOS DE PRODUCTO.

Certifications issued for CERAMICAS APARICI materials by the folowing official bodies:

Certificados emitidos para el producto de CERAMICAS APARICI por los siguientes organismos oficiales:

SPAIN. ESPAÑA

GERMANY. ALEMANIA

CE.COMUNIDAD EUROPEA

ITALY. ITALIA

E.E.U.U. ESTADOS UNIDOS

- **Time.** – It allows mounting over already existing surfaces, thus, eliminating demolition work and clean-up associated with it. This in turn, reduces time spent completing projects.
- **Money.** – A lighter and quicker element to work with, adding up to time saved.
- **Easy.** – Its reduced thickness translates into less weight per piece, facilitating handling, cutting and installation.
- **Hygiene.** – A non-porous, low water absorption surface makes for a highly hygienic product.
- **Ecologic.** – Its manufacturing complies with all existing environmental norms and regulations.
- **Technology.** – Slim4 is the result of the latest technological advancements in the production of ceramic tiles. It represents the latest generation of stone-ware tiles found in the market.
- **Tiempo.** – Reduce el tiempo de ejecución del proyecto, ya que permite la posibilidad de alicatar sin demoler la construcción, sin arrancar el chapado existente, o sin generar molestos desescombros.
- **Dinero.** – Reduce costes al acortar el tiempo de la reforma y al ser un elemento de construcción más ligero y rápido.
- **Fácil.** – El menor espesor deriva en un menor peso por pieza, que facilita la manipulación en la obra. Es más fácil y rápido para cortar y ensamblar.
- **Higiene.** – son superficies no porosas, con baja absorción de agua, por lo que resultan especialmente higiénicas.
- **Ecología.** – la fabricación de este material cumple con todas las normativas existentes a nivel medioambiental.
- **Tecnología.** – Slim4 es el resultado de un gran avance tecnológico en el desarrollo de las técnicas de producción. Supone la última generación lanzada al mercado en cuestión de productos porcelánicos.

PREPARING TILING.

The ground to fix the porcelain tiles should be dry, plain and with the adequate consistence. Before starting, all rests of dust, greases and oils should be removed.

ACONDICIONAMIENTO DEL FONDO.

El fondo de colocación o soporte debería estar seco, plano y con la consistencia adecuada. Previamente se deben limpiar los restos de polvo, grasas y aceites.

GRIPPING MATERIAL.

The gripping material should be aplicated with a trowel of teeth to achieve a correct distribution of the material on the whole surface. That surface should be flat and completely dry and clean of dust and grease. In walls, the large and medium formats should be put in a fine coat with glue cement with synthetic resin; while in smaller formats thicker coats of traditional mortars can be used. In floors, the use of glue cement with synthetic resins, excepting in the case of exteriors where more traditional mortars are permitted. In the case of the porcelainic, the positioning is done in a fine coat with a base cement with synthetic resins.

MATERIAL DE AGARRE.

El material de agarre debe aplicarse con una llana dentada para conseguir una distribución correcta del material por toda la superficie. Dicha superficie debe ser plana y estar completamente seca y limpia de restos de polvo y grasa. En revestimiento, los formatos grandes y medianos deben colocarse en capa fina con cemento cola con resinas sintéticas; mientras que en formatos más pequeños pueden utilizarse morteros tradicionales en capa gruesa. En pavimento, se recomienda también el uso de cemento cola con resinas sintéticas, salvo en el caso de exteriores donde se permiten los morteros tradicionales. En el caso del porcelánico, la colocación se realizará en capa fina con base cemento con resinas sintéticas.

FIXING.

Once mixed the product with the quantity of water indicated in the packing, press and spread the fixing product on the ground, by using a trowel of teeth of adequate size, pressing the tiles on the fixing material. For porcelain sized bigger than 30x30 cm, use the double-glued technique, distributing the fixing material on the ground and putting a fine cover on the back side of the tile. This practice is indispensable for external uses. For grounds different to common ones, and specific fixing applications, use fixing materials as per producers references.

COLOCACIÓN.

Una vez amasado el producto con la cantidad de agua indicada en el envase, presionar y extender el adhesivo sobre el fondo de colocación, utilizando una llana de dientes de tamaño adecuado, presionando las baldosas sobre el adhesivo todavía fresco. Para formatos superiores a 30x30 cm emplear la técnica de doble encolado, peinando el adhesivo en el soporte y untando una capa fina en la parte posterior de la baldosa, facilitando la cobertura total de la misma, esta práctica es imprescindible para la colocación en exteriores. Para los fondos de colocación diferentes a los comunes y exigencias de colocación específicas, utilizar adhesivos idóneos siguiendo las recomendaciones del fabricante.

JOINTS.

The principal functions of the placing joints are: absorb deformation of the supporter, to gain more adherent space for the pieces and the gripping material, and to better the waterproof ness of the surface. In the selection of the re-covering material you have to have in mind the place of placement and the situation of the material, even though it is recommended the use of joints with polymeric adhesives or synthetic resin and not whitewash Portland cement (because of its excessive porosity and lack of adequate adherence). In the market there exists a large variety of colors for re-covering. An open joint of adequate dimensions has to be left always, as per the tile dimensions, using a grouting material of good quality. Respect the perimetral joints and provide for expansion joints interior (5x5 m) and exterior (3x3 m).

JUNTAS.

Las funciones principales de las juntas de colocación son: absorber deformaciones del soporte, aumentar la superficie de adherencia entre las piezas y el material de agarre, y mejorar la impermeabilidad de la superficie. En la elección del material de rejuntado hay que tener en cuenta el lugar de colocación y la situación del material, aunque son recomendables el uso de juntas con aditivos poliméricos o resinas sintéticas y no lechadas de cemento Portland (por su excesiva porosidad y falta de adherencia adecuada). En el mercado existe una amplia variedad de colores para rejuntado. Se dejará siempre junta de colocación abierta de dimensiones adecuadas, según el formato de la baldosa, utilizando material de rejuntado de buena calidad. Respetar las juntas perimetrales y prever juntas de dilatación en interiores (paños de 5x5 m) y exterior (paños de 3x3 m).

CLEANING

The cleaning of the material, once put in place, should not be done with metallic trowel nor abrasive ones, recommending cleaning the remains of the glues and jointing material with a humid sponge. In the case of persistent stains, clean with alcohol and scrub with a clean towel. If they don't disappear, consult with the corresponding technical department. After fixing it, we recommend to use diluted acid products which don't provoke ambiental oxidation. If porcelain tile shows building stains, a basic product should be used and cleaned with abundant water. In those places where water could be calcareous, it is recommended to dry the surface to avoid carbonate because they reduce the superficial brilliancy. During its use, cleaning of porcelain tiles has to be done similar to crystal cleaning. Amoniacal products and even buck, diluted in water can be used.

LIMPIEZA

La limpieza del material, una vez colocado, no se debe realizar con espátulas metálicas ni abrasivos, recomendándose limpiar los restos de colas y material de juntas con una esponja húmeda. En el caso de manchas persistentes, limpiar con alcohol y frotar con un paño limpio. Si no desaparecen, consultar con el departamento técnico correspondiente. Tras la colocación, se recomienda el uso de productos ácidos diluidos que no provoquen oxidaciones ambientales. Si el gres porcelánico presenta manchas de obra, se utilizará un producto básico y se aclarará con abundante agua. En aquellas zonas donde el agua sea calcárea conviene secar la superficie para evitar la deposición de carbonatos que disminuyen el brillo superficial de pulido. Durante su uso, la limpieza del gres porcelánico debe hacerse de forma similar a la limpieza de cristales. Se puede emplear productos de tipo amoniacal e incluso lejía, ambos diluidos en agua.

PRODUCT WITH METALIC.-general cleaning recommendations are as follows:

- As a general rule, any non-agressive, pH neutral product can be used.
- Low concentrated ammoniac based products are recommended, although never directly over the surface. Use a non-scratching cloth.
- DO NOT use chemically aggressive products such as WC6.
- DO NOT use hydrochloric acid based products (HCl), all other acid products should be used with caution, and in diluted concentrations.
- Citric acids and other acid food products will stain the surface if not cleaned immediately.
- Abrasive, powder products are not recommended.

PRODUCTO CON METÁLICO.- Las recomendaciones generales de limpieza son:

- Puede usarse por regla general cualquier producto no agresivo con ph neutro.
- En general, recomendamos el uso de productos con base amoniacal (NH3) en concentración rebajada, nunca directamente sobre la pieza.
- NO se pueden utilizar productos agresivos químicamente (como el WC6).
- NO se puede usar productos con ácido clorhídrico (HCl), el resto de productos ácidos deben usarse con precaución en concentraciones muy rebajadas.
- El ácido cítrico y otros productos alimentarios ácidos dejarán mancha si se les deja actuar en el material.
- No recomendado el uso de productos en polvo de acción abrasiva.

Service . Servicio

Servicio
Service

Nuestros resultados: **0,5** días de plazo de entrega.
Nuestro objetivo: La exelencia en el servicio.

Our goal: The excellence in service.
Our results: Delivery within **0,5** days.

The products marketed by APARICI meet all the norms required by the Spanish European law on environment matters that are applicable to the products manufactured in Spain. This legal imperative has encouraged us even more to set our internal goals to minimize to the maximum the environmental impacts derived from our productive process.

Los productos comercializados por CERAMICAS APARICI cumplen en materia medioambiental con la normativa exigible por la legislación Española y Europea aplicable a los productos elaborados en España. Este imperativo legal nos ha motivado más si cabe a marcarnos nuestros objetivos internos para minimizar al máximo los impactos medioambientales derivados de nuestro proceso productivo.

100% Emissions of poisonous gasses to the atmosphere under the authorised levels.
Nivel de emisiones de contaminantes a la atmósfera inferior al límite autorizado.

100% Of packings and bottling treated and recycled by ECOEMBES.
Envases y embalajes de cartón y madera gestionados por el SIG de ECOEMBES.

100% Dangerous residues treated by authorised treating company.
Gestión de residuos peligrosos y no peligrosos por gestor autorizado.

100% Recycling of sewage water.
Reutilización de aguas residuales industriales.
